

CAR DAY-LIGHT®

- ▶ Improved safety during the day
- ▶ Up to 3 times the service life
- ▶ Fewer accidents
- ▶ Greater efficiency

Driving with your lights on during the day has been compulsory in many countries for years – and will soon be compulsory throughout Europe. As a study by the German Federal Highway Research Institute shows, this can prevent up to three percent of all traffic accidents – a total of 11,000 accidents involving personal injury.

The specially developed Trifa CAR DAY-LIGHTS® offer maximum safety – day and night. You will always have a clear view of other road users, and you will also be seen more clearly and more quickly by oncoming vehicles – even in bad light.

Thanks to their extra long service life, Trifa CAR DAY-LIGHTS® are extremely efficient. They need changing less frequently than standard bulbs, even when they are in use all the time.

Trifa CAR DAY-LIGHTS® don't just improve road safety – they also save time and money!
